**MUGHALS**

**Mughals Pakistan (Pvt) Limited** was founded in 1968 by its present Managing Director Mr Muhammad Akram Mughal. The Company started business as a small family concern in Chittagong by constructing factory building for Glaxo Laboratories. In 1970, in view of the conditions prevailing in Bangladesh, the office of the company was shifted to Karachi.

Mr Akram has headed this company for the last 38 years. Following the broad based policies of its founder the company has executed projects in all the provinces of Pakistan and has established offices in Karachi, Lahore, Islamabad, Quetta, as well as in the Middle East and the USA. Mughals have strived to deliver quality rather than quantity. Though only around hundred projects have been executed to date most of these carry national repute and some are of International significance. Midway House at Karachi, University of Baluchistan, Over-head Bridge in Quetta, HBL 22-Storeyed building, Nigerian Embassy at Islamabad and Islamabad Serena Hotel Islamabad can be quoted as some of the most prestigious projects so far under taken.

Mughals are seen as the pioneers of high quality concrete construction; especially exposed concrete finishes. Mughals were quick to realize and appreciate the importance of form work and false work in the field of concrete construction. In order to create a professional edge Mughals have established their facilities for the development and fabrication of form work and false work. This cell is headed by Mr Akram who has been recognized by Federal Government as a true inventor of a shuttering plate. The patent rights of this plate are exclusive for the use of Mughals. Mughals are expanding by way of forming new sister concerns and associated companies within Pakistan and abroad in order to handle the increased volume of business in an even professional manner.
